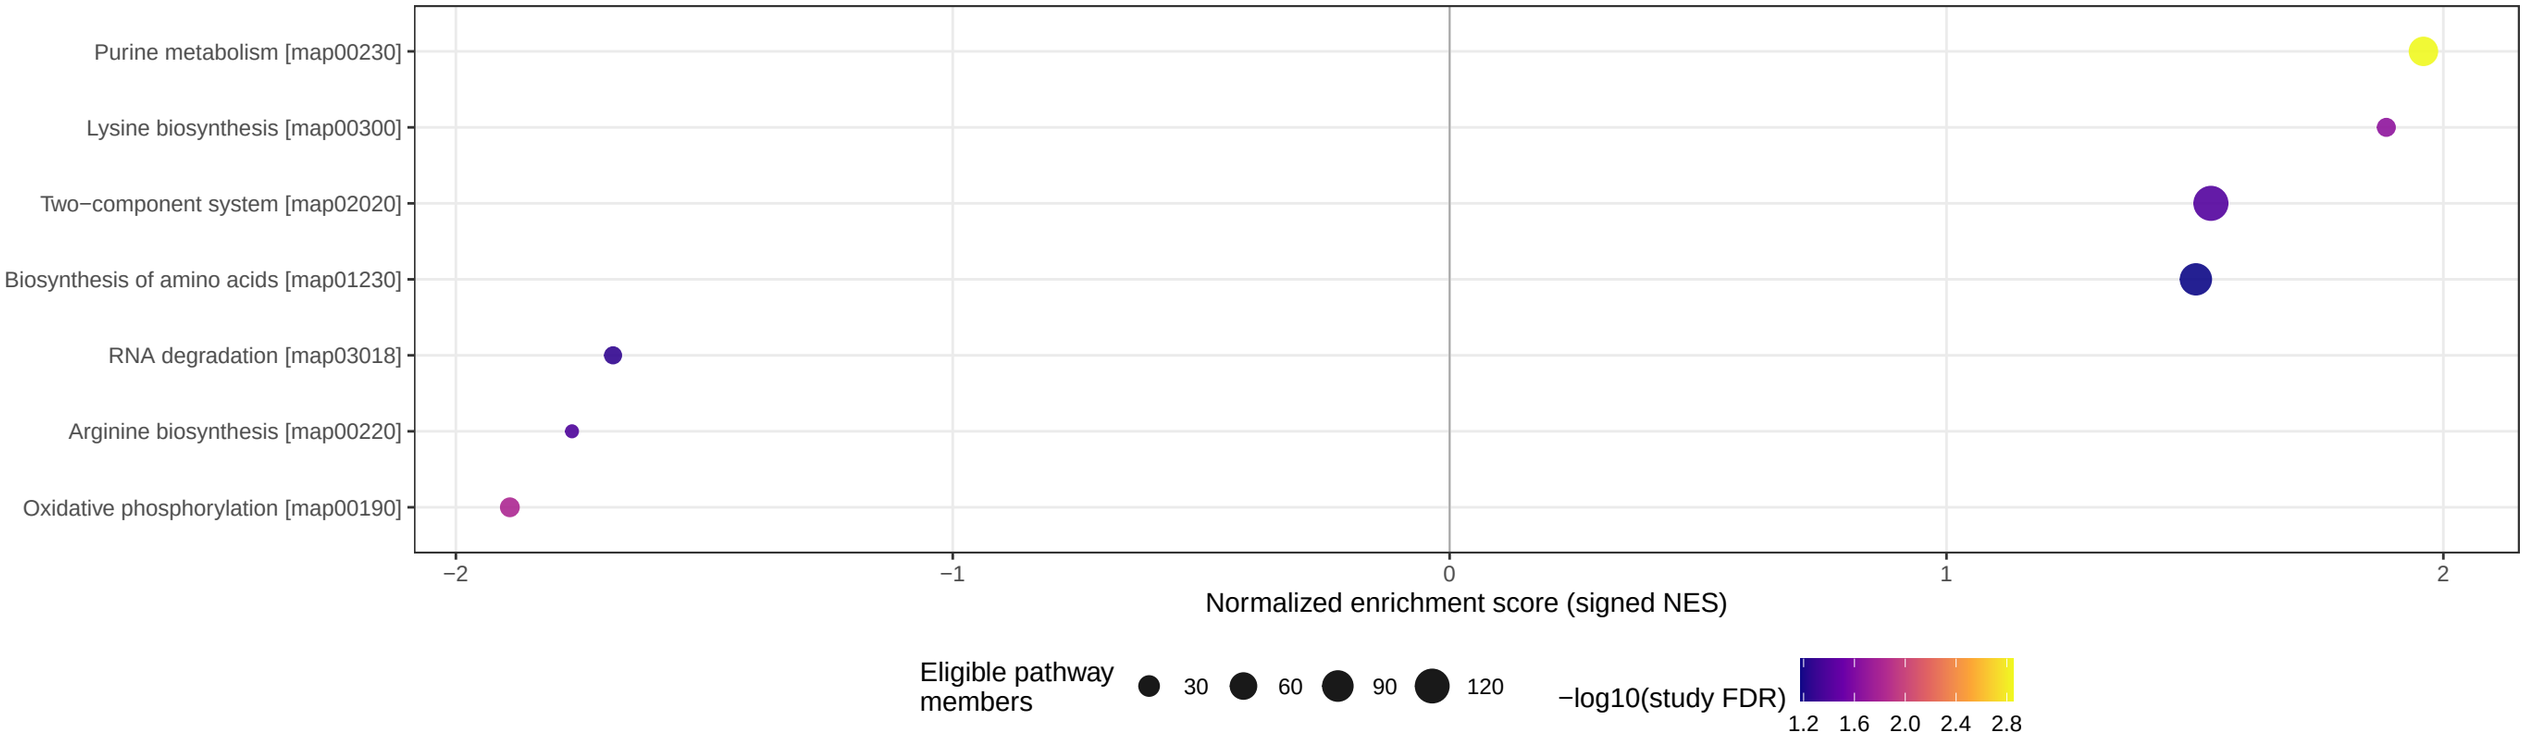
GSEA functional enrichment

KEGG; stk vs anc: PASN response difference
All study−significant terms (FDR < 0.1); observed source models only; no Top−N limit



Rows: largest positive NES to most negative NES. stk vs anc: PASN response difference: NES > 0 = SN−TSB change more positive in anc; NES < 0 = SN−TSB change more positive in stk.
Source lod_imputed models excluded before enrichment; no minimum−replicate filter added. Enrichment is not a direct measure of pathway activity.
