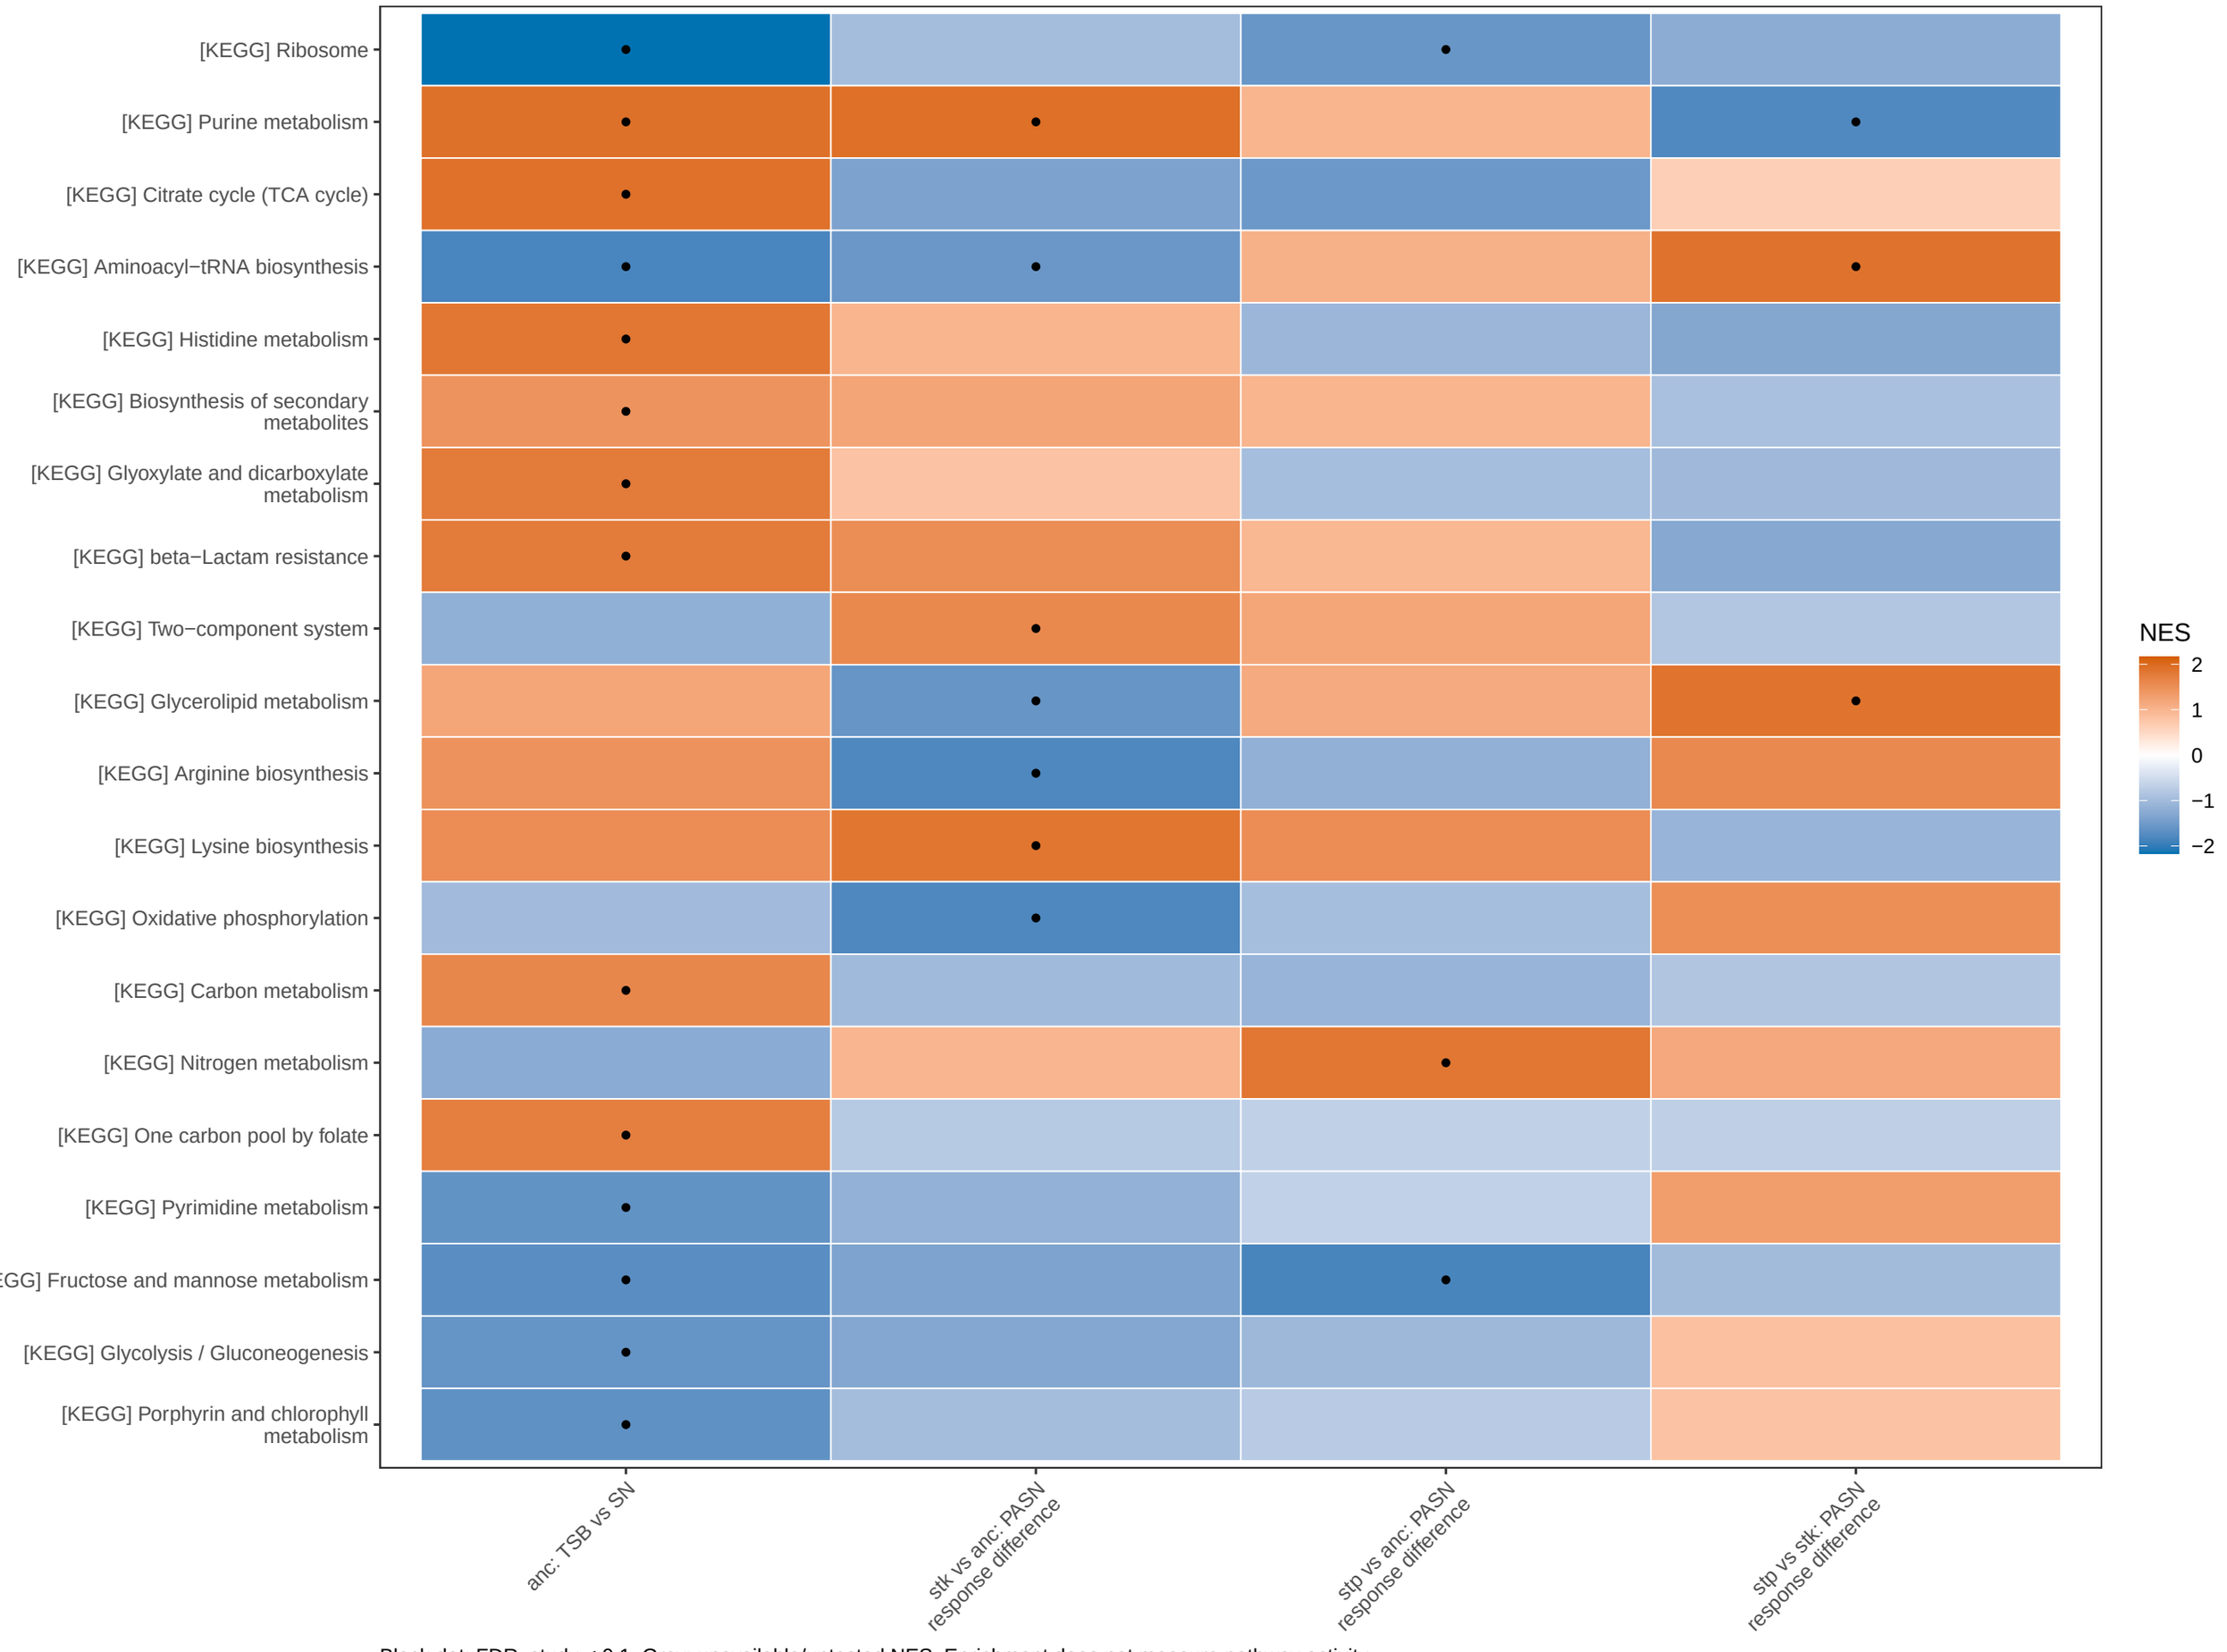
Functional enrichment across comparisons

Terms passing FDR_study < 0.1 in at least one comparison; tested nonsignificant cells are retained



Black dot: FDR_study < 0.1. Grey: unavailable/untested NES. Enrichment does not measure pathway activity.
anc: TSB vs SN: NES > 0 = Higher in TSB; NES < 0 = Higher in SN.
stk vs anc: PASN response difference: NES > 0 = SN−TSB change more positive in anc; NES < 0 = SN−TSB change more positive in stk.
stp vs anc: PASN response difference: NES > 0 = SN−TSB change more positive in anc; NES < 0 = SN−TSB change more positive in stp.
stp vs stk: PASN response difference: NES > 0 = SN−TSB change more positive in stk; NES < 0 = SN−TSB change more positive in stp.
